

ENGIQA

AI Automation Engineering Studio

Engiqa finds one repetitive, manual process in your business and turns it into a working AI-powered automation — usually in one to two weeks, starting with a fixed-price pilot.

LIVE AUTOMATIONS

01 Lead Qualification

Visitor → AI → Intent → Lead → Alert

~3 sec typical reply · 24/7 coverage · ~1 week spec to production

02 Document Processing

Document → Vision AI → JSON → Validation → Approval

~5 sec typical extraction · **deterministic validation** · **human approval**

Both run live on engiqa.com right now — not mockups. These are facts about the live demo systems, not promised results for your business; every engagement is scoped and measured on its own.

How We Work

1. Scope one process

We map a single process with a clear input and output — e.g. "a request comes in and needs to be triaged and answered."

2. Ship a working pilot

We build and deploy a real, working automation on that one process — fixed price, usually live within one to two weeks.

3. Scale what proves out

Once the pilot is proven useful, we extend it to more cases and hand it off, or keep supporting it as you grow.

What We Build

- **Lead & inbox triage** — Incoming messages and requests are read, classified, and routed or drafted automatically.
- **Document processing** — Extract structured data from contracts, invoices, or forms and push it wherever it needs to go.
- **Meeting-to-action pipelines** — Turn call notes or transcripts into summaries, follow-ups, and tasks in your existing tools.
- **Custom integrations** — Connect your CRM, spreadsheets, or messaging apps to AI services so information flows automatically.

See It In Action

This isn't a pitch deck promise — visit engiqa.com and try either automation above yourself: chat with the widget, or run a sample invoice through the document pipeline. Both are the real, working systems — not mockups.

Pricing

Pilot projects typically start at \$1,500, fixed price, agreed after a short scoping call. Ongoing support or extending the automation is quoted separately once the pilot proves out.
